## DETAILED ACTION

### *Election/Restriction*

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claim, drawn to a subcombination method of making a semiconductor light emitting device of a ZnO based compound, classified in class 438, subclass 22.
- II. Claim, drawn to a subcombination method of making a ZnO based compound layer on sapphire substrate, classified in class 438, subclass 479.
- III. Claim, drawn to a combination method of making a semiconductor light emitting device of a ZnO based compound on sapphire substrate, classified in class 438, subclass 22+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because another device can be used. The subcombination has separate utility such as use in a device on a silicon substrate.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

Inventions II and III are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because another device can be used. The subcombination has separate utility such as use in a ZnO layer as an interface layer on a sapphire substrate.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
